Sage Enterprise Intelligence— fully integrated business intelligence

Sage Enterprise Intelligence (SEI) is the missing Business Intelligence link. It provides companies with a competitive advantage based on leading-edge technologies and advanced features, ensuring timely access to meaningful and secure enterprise-wide data.

Sage Enterprise Intelligence unlocks the power of your data and delivers true visibility. You can improve access to information with self-service analytics and reports through an easy-to-use web interface or mobile devices. As the only BI solution purpose-built to integrate seamlessly with Sage's suite of products, SEI has the power to manage even the most complex business data, with an ease of use unmatched in the industry.

With a wide range of reporting templates, data visualization tools, and a fast data processing engine, Sage Enterprise Intelligence is a perfect fit for Sage ERP customers looking to make faster, more informed decisions.

SEI: Features that work, where and when you need them

Simply access data from all sources and systems in your organization. Report, analyze and respond, based on current, real-time information. Make fact-based, informed decisions that boost business growth and drive efficiency.

SEI's wide range of dynamic, integrated features includes:

Real-time reporting and embedded analytics
Measure the performance of your organization and the different factors that impact your business and make data-driven decisions faster. An intuitive interface allows you to navigate through views, dashboards, and reports that provide the information you need, where and how you need it.

Pre-built templates for views, dashboards, and reports
Analyze your data in the most meaningful way, with over 100 visualizations and flexible reporting with advanced calculations and customization options.

Universal Data Model
Our Universal Data Models can consolidate and access large amounts of data and provide KPIs for Finance, Sales, Inventory, and CRM.

Data warehousing and prepping
SEI includes replication, consolidation, migration, and transformation of data across all types of platforms and systems. Our software takes care of all the complicated back-end details so that you have the tools to focus your energy on where your business needs it most.

Custom data connectors
No matter what data source you are drawing from, SEI can seamlessly connect, without having to engage cumbersome third-party tools. Use our hundreds of ready-to-use connectors for common apps and databases to access every datapoint—even custom fields. You can also create custom data connectors to create new data sources or customize and extend an existing source.

Sage

Customer reference: Avon Rubber

Industry: Industrial Manufacturing

Location: Wiltshire, United Kingdom

System: Sage X3, Sage Enterprise Intelligence

Challenge: Avon Rubber was utilizing eight separate reporting applications to gather, analyze, and distribute its business data. Staff struggled to learn and to use the applications, thereby placing a substantial burden on the company's resources.

Solution: Sage X3 with Sage Enterprise Intelligence is a powerful web-based reporting solution that is easy-to-learn and easy-to-use.

Results: The solution paid for itself immediately through reduced demand on IT personnel. Data is now accessible anywhere, anytime. Even disparate data can be brought together and shared across the enterprise quickly and easily.

"Users get the information they need on their own... They can use the templates that come with the software and modify them as needed. That means they no longer require analysts or IT technicians to uncover the data. We now have just three IT staff to support the Sage X3 solution enterprise."

Mike DePasquale
Group Enterprise System Manager, Avon Rubber p.l.c.

Sage

"If you understand the power of data in your business decision making, you'll instantly see the value in this tool."

Mike DePasquale
Group Enterprise System Manager, Avon Rubber p.l.c.

Better visibility, extraordinary decision support

What does a modern, integrated business analysis tool look like? Sage Enterprise Intelligence easily connects to ERP transactional data and provides the intuitive self-service tools you need to drive accurate analysis and better decision-making.

Key features of SEI include:

1. Up-to-the-minute information access

There is no substitute for having real-time access to data. Sage Enterprise Intelligence offers fast online analytical processing (OLAP) the largest data volumes. This drives value to business users by supplying the information they need to make decisions in a timely fashion. Integrating with multiple data sources, Sage Enterprise Intelligence supplies business users and managers with accurate, up-to-date information whenever it's needed.

2. Interactive data visualization and analysis tools

Sage Enterprise Intelligence provides business users, managers, and executives with a simple tool to both access and analyze enterprise data. It's easy to set up KPIs and personalized dashboards so users can view data that's most meaningful to their role in the organization.
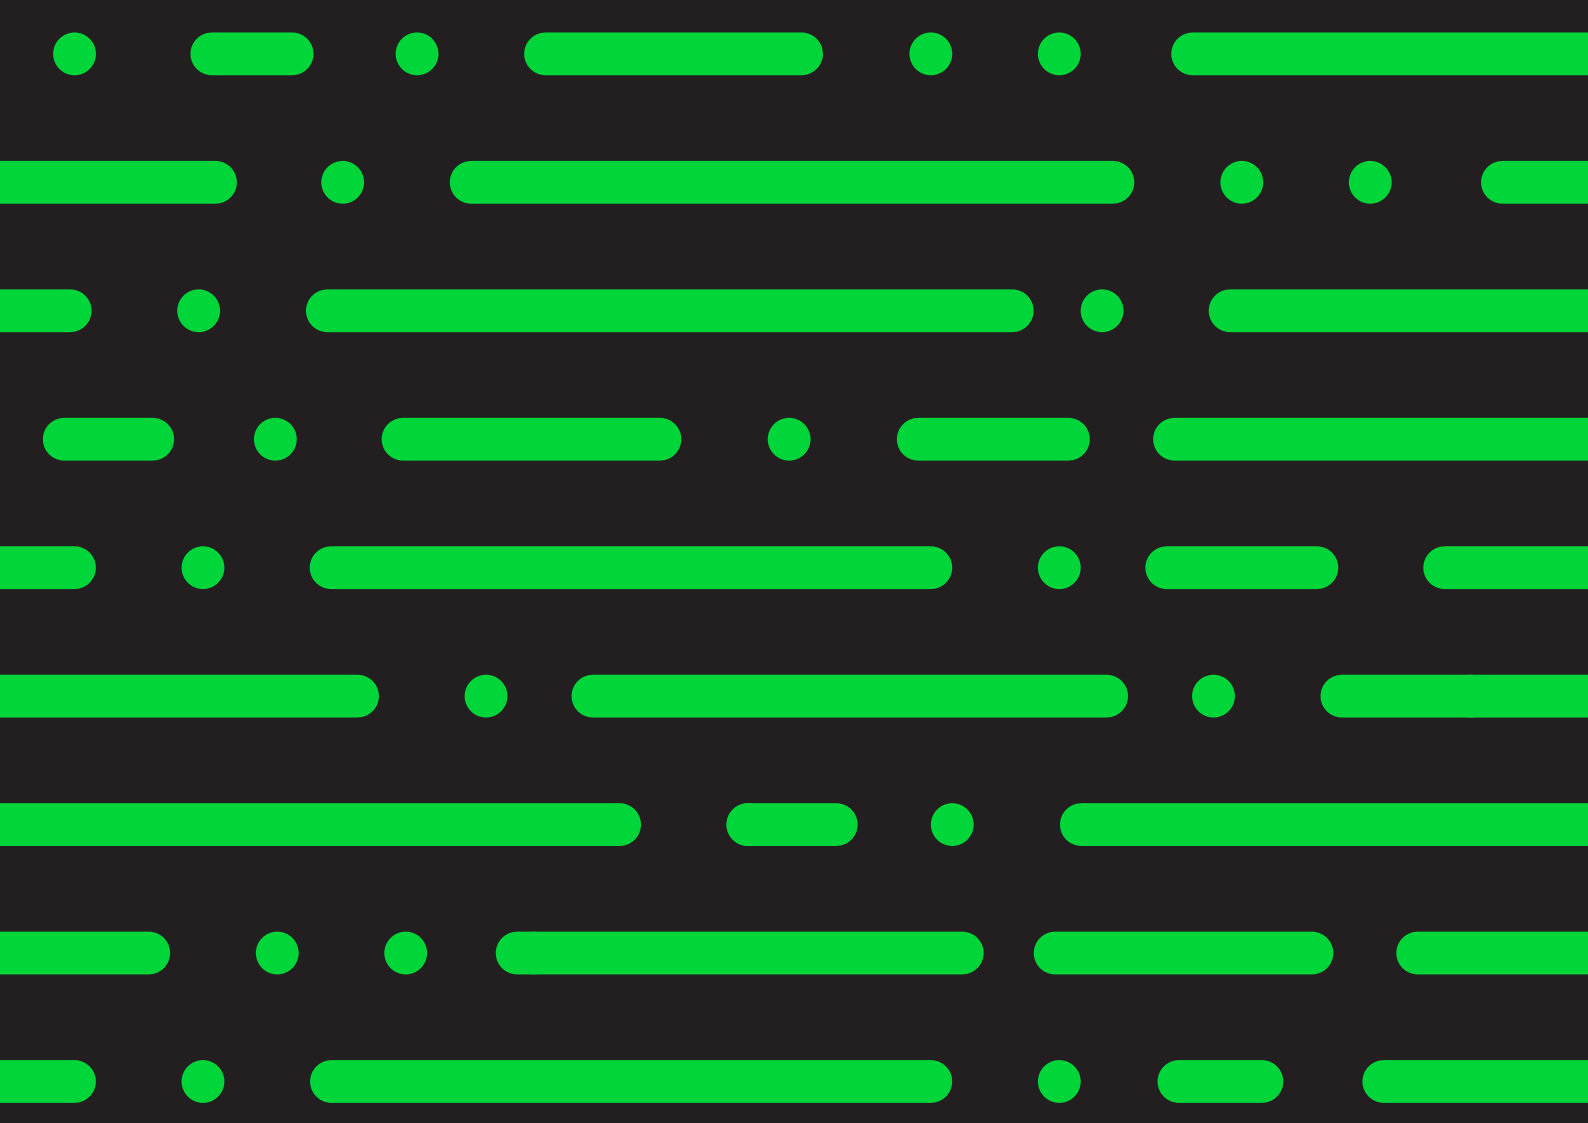

3. Collaboration

When building your analytics strategy, it's important to support collaboration and knowledge sharing. This ultimately leads to better decisions and business performance. Sage Enterprise Intelligence helps you simplify and accelerate the distribution of critical information across your organization.

4. Self-service and mobility

There's a reason so many businesses have relied on Excel for so long to analyze their data. It's easy-to-use and just about everyone knows how to use it. However, Excel is not designed to handle the vast amounts of data we have today. Sage Enterprise Intelligence is. It has an intuitive web interface that makes data gathering, collation and analysis easy. You can also leverage existing skills on your team and work with the power of Excel to report on your data.
