

DATA SHEET

Qlik NPrinting

Spread Knowledge and Insight

INTRODUCTION

Want to discover all the connections in your data? Qlik Sense® and QlikView® have you covered. Ready to share those discoveries across your organization and beyond? Now, you're ready for Qlik NPrinting®.

Qlik NPrinting uses popular portable formats like Microsoft® Office and PDFs, so it's easy to share reports with anyone. Centralized distribution and a self-service subscription hub allow everybody to get the right reports when and how they need them. And with role-based security and multi-threaded, multi-engine scalability, Qlik NPrinting is designed to support your entire enterprise.

You can finally say goodbye to your legacy BI systems. With Qlik NPrinting, Qlik® can become your complete and single solution for interactive analytics and reporting.

Create Great Looking Reports Fast

Microsoft Office Reporting and Integration

Microsoft users can use their Qlik data and visualizations to quickly and easily create great looking reports in popular Office formats like PowerPoint®, Excel®, and Word. Just drag-and-drop existing tables, charts, and objects. You can even combine Qlik Sense and QlikView analytics from multiple apps into a single report.

PixelPerfect and Web Reports

Developers can use built-in editors to turn data and analytics from Qlik Sense and QlikView into highly polished PixelPerfect reports or HTML reports for web publication. PixelPerfect is the Qlik NPrinting solution to create aesthetically perfect reports from Qlik data and export them to PDF. Advanced control over banding, scripting, formatting, and graphics allow you to produce high-quality custom reports or assets like client statements.

Web-Based Client

Our new interface enables users to access the developer (except MS Office template authoring), administration, and reporting features via the web. All you need is an internet connection and any smart device. The web-based client lets your organization manage users and installs at the server level, which removes the limitations of standalone developer clients. This means your organization can more easily manage and secure multi-developer environments. And users can easily access the client and reporting hub without having to install software.

The Right Reports for the Right People

Managed Report Distribution

Everybody needs different data. At different times. And they need it delivered via different channels in different formats. Sounds complicated, but Qlik NPrinting makes it easy. You can centrally schedule, generate, and deliver custom reports through a variety of channels, including email, save to disk, web, the Qlik NewsStand portal, or directly to the Qlik Sense hub. You can deliver QlikView PDF reports along with Qlik NPrinting reports. You can even encrypt the reports or have them run only when certain conditions are met.

NewsStand Subscription Portal

What's the best way to make sure everyone gets the reports they really need? Let them choose for themselves. That's what the Qlik NPrinting NewsStand is all about. Your organization sets up the role-based security and the rest is self-service. Users explore, view, download, and subscribe to reports online via one secure and centralized portal. It's easier and more convenient for users – and less busywork for IT.

Collaborative Analytics for Everyone

Multi-Threaded Scalability

If you're a "what's under the hood" person, here's the info you've been waiting for: The NPrinting engine is multi-threaded and supports clustering, which means it can execute tasks simultaneously for increased performance even during high volume reporting. A server cluster also provides redundancy, which improves reliability, load balancing, and task prioritization for optimized report generation. In other words, you can scale to deliver more reports to more people without worrying about performance or reliability.

Enhanced Role-Based Security

You know how Qlik NPrinting puts the right data in the right hands. Now, let's talk about how it keeps the wrong data out of the wrong hands. Role-based security makes it easy with centralized control over access to reporting features and data. You can define any number of security profiles at the app level. Assign multiple roles to a single user. And customize profiles with high granularity using a wide range of permissions. Simple as that, you choose the features and data available to administrators, developers, report recipients, or anyone else.

Reporting Efficiency and Value

With Qlik NPrinting, Qlik is the only platform your organization needs for analysis and reporting. You can use the same data models for both functions, which means you can finally retire your redundant BI systems to cut significant costs. And, you can even embed links to your Qlik analytics applications within your reports. That encourages everyone to explore further, dig deeper, and discover the whole story in their data.
